FEATURES & BENEFITS

- Versatile design provides support, compression, cold therapy and/or heat therapy to the shoulder to target pain/swelling area
- Improved performance over circulating ice machines per clinical study: <https://smicoldtherapy.net/clinical-studies/>
- Designed for self-application if necessary
- Allows full mobility while being used
- Can be positioned to target front or back of shoulder area
- Latex free with an anti-microbial liner that wicks moisture

COLD THERAPY INSTRUCTIONS

- Place Gel Bags in a freezer set 3/4 of the way to max temperature for at least (4) hours. For best results, lay the Gel Bags flat and side-by-side in the freezer. Once frozen, slide Gel Bags into the gel pouch and secure your wrap to the affected area with the straps.
- Gel Bags that have been stored in a freezer for an extended period may require a (10) minute period of softening up in a room temperature environment before application.
- The gel pouch acts as a protective barrier. **NEVER** place frozen Gel Bags directly onto skin as this may cause frostbite injury.
- The SMI Cold Therapy Wrap is designed to be able to be worn while ambulating. The compression straps can be secured well enough so that the Wrap won't fall off while moving.
- Wrap Application Videos may be viewed at smicoldtherapy.net/video-library.
- An additional protective barrier such as clothing, a washcloth, hand-towel or pillowcase may be used during prolonged treatment applications.
- The Gel Pouch and Wrap are both Latex-Free and the Gel Bag ingredients are non-toxic.

The SMI Cold Therapy Wrap **may be hand or machine washed** with mild detergent and hung to dry when needed. Disinfectant wipes may be used for spot cleaning both the wrap and gel bags.
